

HIT'n'MIX Infinity Now Distributed by Plugivity

"HIT'n'MIX INFINITY - The World's First Atomic Audio Editor"

Plugivity Distribution today proudly announce their partnership with HIT'n'MIX to distribute, "HIT'n'MIX Infinity", through their pro audio global reseller network.

HIT'n'MIX Infinity is a revolutionary software application; unlocking your audio with atomic editing capabilities for Windows and macOS platforms.

HIT'n'MIX Infinity will be available from Tuesday April 7th, 2020, at \$349 via Plugivity Distribution and all reputable pro audio resellers worldwide.

HIT'n'MIX Infinity isn't just another audio editor. The possibilities are endless...

Unlock audio. Work with the actual notes, harmonics and percussive sounds that audio is constructed from. No difficult edits on waveform's and frequency spectrum's.

HIT'n'MIX Infinity can apply completely fluid pitch changes to notes in stereo mixes, even clone them from other sounds. Clean up individual harmonics with surgical precision, and add realistic sounding harmonies to vocals and instruments.

With Audioshop tools, you can make detailed edits and run automated scripts on pitch, levels, panning and more...

What's more, HIT'n'MIX Infinity fits within the workflow of most DAWs, such as Pro Tools, Logic Pro X, Ableton Live and FL Studio.

Remixers, music producers, sound designers, video and audio post production editors can:

- Approach sampling in new ways. Separate, manipulate and re-create vocals, instruments, beats and background fx plus copy to other tracks for quick remix work.
- Experiment with new Tempos/BPMs. Re-quantize and alter grooves. Create new and unique DJ mixes.
- Auto-detect and change chords, keys, modes, transpose, create realistic-sounding harmonies, copy/paste, shorten & lengthen notes, all without opening a menu.
- Create new instrument parts/stems and import previously recorded parts/stems or samples into stereo mixes.
- Tighten or loosen timing, and re-balance your mixes.
- Import videos (most MP4, M4V & MOV, some AVI). Edit in sync with video. Export MP4 & MOV.

Audioshop Tools:

Discover a new sound. HIT'n'MIX Infinity Audioshop makes reworking audio feel as natural as retouching a photo.

- Draw detailed pitch changes.
- Clone pitch changes from other notes.
- Draw instruments and samples.
- Replace instruments and samples.
- Add realistic vibrato.
- Blend sounds.
- And more...

"It's Extraordinary. I Love It !"- Guy Sigsworth
Composer, Producer & Songwriter
