

## New product: SPL Phonitor se

The entry into the SPL “Professional Fidelity” Phonitor world

The Phonitor se features the same audio signal amplification as its bigger brothers Phonitor x and Phonitor xe and therefore – thanks to SPL's VOLTAiR technology – offers the same sound experience. Of course, the high-quality look and feel is maintained. Play back analog signals via an unbalanced stereo RCA input and digital players via the optional DAC768xs.

An unbalanced headphone input on the front of the device allows, easily accessible, the connection of all common types of headphones.

Thanks to its powerful amplification stage, the Phonitor se provides enough output power [2 x 5W at 250 Ω (1 kHz, 1 % THD)] to satisfy even the most demanding headphones. With a retail price of 973,82 € including 16 % VAT, the Phonitor se is significantly cheaper than the reference headphone amplifier Phonitor xe (RRP: 2.046,09 € including 16 % VAT).

“The connectivity options and functions of the bigger SPL headphone amplifiers are too extensive for some occasional headphone listeners. After having developed the Phonitor xe, the ultimate headphone amplifier, I am pleased that we now have a version reduced in feature set and price on the market – the Phonitor se.” - Bastian Neu, Developer
