

Voxengo Water Chorus

Voxengo announces the release of Water Chorus, a stereo chorus effect plugin, available in AAX, AudioUnit, VST3, and VST plugin formats, for macOS and Windows computers. Water Chorus is a re-branded and visually re-designed version of CRTIV Chorus (which is now discontinued). Owners of CRTIV Chorus license can crossgrade it to Water Chorus freely at the Voxengo website.

Water Chorus is a stereo chorus effect plugin for professional sound and music production applications. Water Chorus is able to produce stereo-widening and weird “watery” modulation effects, possibly with a flanger vibe.

Water Chorus plugin uses 4 operators for each channel thus creating a quite dense stereo chorus sound, which is also very smooth.

Water Chorus features:

- Feedback for flange and delay effects
- Low-pass filter
- Stereo processing
- Preset manager
- Undo/redo history
- A/B comparisons
- Contextual hint messages
- All sample rates support
- Zero processing latency
- Retina and HighDPI support

A demo version of Water Chorus can be downloaded freely at the Voxengo website.
