

Evergreen Audio Design Group Post Production Metering Suite for Pro Tools

Evergreen Audio Design Group announce the release of the Post Production Metering Suite, offering powerful new tools for flexible metering in post production studios. The Post Production Metering Suite is a flexible software package combining the Massive Meter AAX plugin and Massive Meter Bridge desktop application for viewing of multiple meters in a single, customizable view.

The Massive Meter Bridge can view multiple Massive Meter plugins independent of what computer the plugins are hosted on. No special hardware or complicated second computer are needed, removing the considerable cost and complications often associated when creating such a system.

Key Features:

- Meter as many audio tracks across as many computers as needed
- Multiple copies of the Massive Meter Bridge viewing plugins at the same time providing each mix engineer with their custom meter view
- Run the Massive Meter Bridge on different computer than Pro Tools to save system resources
- Resizeable user interface to use as little or as much screen real estate as desired
- Customized scaling to focus on the important ranges
- Independent coloring for each meter

- Customizable meter and system names
- Show and hide individual meters or systems
- Universe View shows all meters independent of which system they belong to
- Gradient or segmented meter indicators
- Meter Linking group meters together to provide PEC/Direct style metering
- Meter in Peak or RMS mode
- Meter Focus provides zooming into a specific meter in the Massive Meter Bridge
- Supports "Always On Top" to allow the Massive Meter Bridge to be on top of a Pro Tools Session
- Create Templates to match Pro Tools Session Templates for fast setup
- Create Configurations that match specific Pro Tools Sessions to
- Supports all Pro Tools channel formats

The Post Production Meter Suite is a combination of the Massive Meter AAX plugin and Massive Meter Bridge desktop application. The suite provides 1 iLok based license for the Massive Meter Bridge application and 4 licenses for the Massive Meter plugin. Additional licenses for the Massive Meter Bridge desktop application can be purchased separately to expand the system and allow multiple views of the Massive Meters.

The Massive Meter can be used on tracks of any channel format. As many Massive Meters as needed can be used in a single Pro Tools system. The Massive Meters operate independently of the Massive Meter Bridge application and can be used on their own. The Massive Meter Bridge desktop application allows a user to view as many Massive Meter plugins as there are. The Massive Meter Bridge application can view plugins on one or multiple Pro Tools systems. The Massive Meter Bridge application can run on the same or different computer as a Pro Tools.

The real power of the Post Production Metering Suite is that the system can be setup to have multiple Massive Meter Bridge applications each with a customized view and each viewing Massive Meters on any Pro Tools system. This allows large post production stages to have custom meter views for each mix engineer or multiple views for each mix engineer.

Supported Systems

- macOS Mojave 10.14 through Monterey 12.
- Pro Tools 12 and above.

Pricing And Availability

- Post Production Metering Suite
- Standard Price \$499, Introductory Price \$399*
- Massive Meter Bridge Application Additional Licenses
- Standard Price \$249, Introductory Price \$199*
