

Biamp Desono DX Loudspeakers

Biamp, a supplier of professional audiovisual solutions, today introduced Desono DX, a new line of attractive, high-performance, high-output ceiling and surface mount loudspeakers that will replace Biamp's Desono D Series loudspeakers. Desono DX loudspeakers integrate the most notable features from the D Series - including the same high intelligibility, exceptionally uniform coverage, and the shallowest back cans in the industry - with a sleek, edgeless magnetic grille design, uniform voicing across all models, and time-saving installation features. An additional line of Desono loudspeaker accessories offers even more options to address any installation challenge.

"For over a decade, the D Series has been one of our most popular loudspeaker product lines. It's a platform that offers both extraordinary acoustic performance and unparalleled versatility, making it a go-to solution for our customers time and time again. The new Desono DX line of loudspeakers builds upon the legacy of the D Series and carries it forward with enhancements that offer even more flexibility and ease of use," said Joe Andrulis, Executive Vice President of Corporate Development at Biamp. "Desono DX is a comprehensive offering of easy-to-use specify and install loudspeakers that further establish our Desono Business Audio solutions as an industry-leading line up. With a consistent aesthetic, feature set, and user experience across both ceiling and surface mount loudspeakers, the Desono DX line gives customers the freedom to select the best loudspeaker for a range of applications, while maintaining a consistent look and feel, and offering exceptional ease of installation."

Desono DX ceiling loudspeakers provide high output and superior acoustic performance. With an edgeless, magnetic grille design, they match other Desono ceiling loudspeakers. DX ceiling loudspeakers have a CCEA compliant design in accordance with local codes and regulations. New reinforced SpringLock Clamps

with coarse threaded screws allow clamping on to thin surfaces and eliminate metal "drop stop" tabs or mounting clamps, improving the installation experience. Desono DX ceiling loudspeakers fit existing Desono accessories, as well as a suite of new accessories designed to address a variety of installation variables:

- Black edgeless grilles
- High-humidity, corrosion resistant grilles
- 48" tile rails
- Installation trim rings
- New construction brackets

Desono DX surface mount loudspeakers offer an attractive, modern aesthetic that complements the premium Desono EX loudspeakers launched in 2021. Desono DX loudspeakers are outdoor ready at an indoor price, offering marine-grade aluminum grilles and impact-resistant polymer cabinets. Each DX surface mount loudspeaker also includes a CMX ClickMount pan-tilt mounting bracket or an optional U-Bracket for mounting flexibility.

Both Desono DX ceiling and surface mount loudspeakers include matching coaxial, HF compression drivers for consistent sound quality, as well as eco-friendly packaging for fast unboxing and installation with minimal clean-up.
