

WORK PRO PulseDrive Series

WORK PRO Audio, the installation and pro audio division of Equipson, has launched the PulseDrive Series, a new range of DSP (digital signal processing) amplifiers consisting of four high-performance models in a compact, easy-to-carry format offering from 300W-1000W per channel to provide total versatility.

The PulseDrive Series combines high efficiency with a significant reduction in weight and size, making it ideal for portable sound reinforcement systems. There are four models in the series: the PulseDrive 602 (2 x 300W channels), the PulseDrive 1002 (2 x 500W channels), the PulseDrive 1204 (4 x 300W channels) and the PulseDrive 2004 (4 x 500W channels). All models feature switch-mode power supplies for efficient power conversion as well as advanced DSP, allowing users to precisely adjust and configure parameters including EQ, delay and compression to produce optimal sound in any environment.

Each amplifier can be controlled via an intuitive onboard OLED display or from a PC, with an encoder giving simple navigation of the DSP settings. Additionally, the PulseDrive amplifiers feature LAN connectivity for remote control and monitoring via PC software, making them an excellent choice for both live performances and permanent installations where ease-of-use and flexibility are crucial. The PulseDrive

WORK PRO announce PulseDrive Series of Power Amplifiers

Mittwoch, 16. April 2025 20:22

Series runs on the UDP (user datagram protocol) platform to ensure reliable network control, while PulseDrive Control Editor software supports control across multiple devices.

With a robust protection system that includes thermal, short-circuit and power on/off muting safeguards, the PulseDrive Series ensures reliability in the most demanding conditions.
