JH Audio DiamondCast Finishes

Jerry Harvey Audio today announced ten new DiamondCast finishes for its custom in-ear monitors (IEMs), expanding the brand's premium personalization options for musicians, audiophiles, and audio professionals. Available as custom shells or faceplates, the new finishes combine distinctive colorways with real reclaimed diamond material, creating a unique look for each pair of monitors.

DiamondCast is made from high-density resin material with real reclaimed diamond chips embedded throughout. The diamond material is reclaimed from chips produced by professional diamond cutters, providing a conflict-free source while adding a visual character not possible with traditional shell materials.

The new collection includes ten colorways: Blue Steel, Electric Moss, Royal Static, Scarlet, Lagoon, Dark Indigo, Phantom Black, Pink Voltage, Abyss Teal, and Ember. The material is CNC-machined and shaped into custom shells or faceplates, giving each IEM a distinctive finish with natural variation, depth, and reflective detail. As the diamond material is distributed differently in every block, no two DiamondCast finishes are exactly alike. Each DiamondCast order includes a Certificate of Authenticity. "Customization has always been an important part of the JH Audio experience," said Jerry Harvey, Founder of JH Audio. "DiamondCast gives customers another way to make their monitors personal, with a material that looks different in every build."

"DiamondCast began as a way to bring real diamond material into handcrafted

objects in a form that could be machined, finished, and made truly personal," said Tim McKenzie of McKenzie Penworks. "Seeing it used in custom in-ear monitors is a natural extension of that idea, giving each pair its own depth, character, and individuality."

The new DiamondCast finishes are available immediately as custom shells or faceplates across JH Audio's custom IEM lineup. Customers can choose different finishes for each earpiece, select matching pairs, or combine DiamondCast with other shell and faceplate options.

DiamondCast shells are priced at $200 per shell, per side. DiamondCast faceplates are priced at $75 per faceplate, per side. You can configure a custom IEM at the Website below.
