PK Sound integrates Milan

PK Sound, the robotic line array company, has officially integrated Milan networking into its core product offering, beginning with Milan certification for the Tx Series of intelligent point source modules (pictured above) and the Ts15 compact intelligent subwoofer. This milestone reinforces PK Sound’s commitment to delivering simple, reliable, and future-proof connectivity across a wide range of mobile and installed audio applications.

“At PK Sound, we believe the next generation of professional audio will thrive on collaboration and the open exchange of ideas to raise the bar for our industry,” shares Colton Schmidt, Engineering Manager at PK Sound. “Milan’s open standard guarantees future-proof investment, supported by a growing ecosystem of certified devices and the collective efforts of the Avnu Alliance. With Milan-certified PK Sound systems, users can expect seamless interoperability, robust performance, and confidence in every deployment.”

Milan provides a standardized endpoint solution for professional audio systems, built on established AVB IEEE standards. PK Sound’s Milan-certified loudspeakers integrate effortlessly into any Milan-enabled ecosystem, connecting via standard Ethernet to mixers, processors, amplifiers, and other certified devices. From compact installations to large-scale touring systems, Milan ensures consistent performance and interoperability across brands, allowing users to build complete end-to-end signal chains with confidence.

PK Sound’s proprietary VE Amplifier platform simplifies and streamlines interconnectivity, with system control, onboard DSP, and Milan / AVB end points routed through Neutrik’s DR Series of IP65-rated connectors for maximum stability. The modular and field-replaceable VE15, VE30, and VE40 comprise the backbone of

PK’s current and future technology offerings. An Associate Member of the Avnu Alliance, PK Sound now offers Milan functionality for both new and existing Tx and Ts products. Certification will soon extend to the company’s robotic line source systems and full product portfolio. Current users can activate Milan remotely by contacting PK Sound’s Support team.

“The Avnu Alliance is proud to have PK Sound as a member and congratulates them on their first Milan-certified products,” says Dave Cavalcanti, President of the Avnu Alliance and Principal Engineer at Intel. “Milan certification delivers a powerful combination of features and usability, enabling audio professionals to implement cost-effective, networked solutions with ease. We’re thrilled to have PK Sound contributing to our shared mission and expanding the Milan ecosystem.”
