

DAW Software 1BITDRAGON 2.0 is Out

1BITDRAGON 2.0 is officially out. The latest version of the super easy and fun music-creation software is now here, including its most anticipated feature: MIDI export.

1BITDRAGON is a small music creation software that allows you to quickly create your own songs in minutes. 1BITDRAGON is designed to be simple, instant and fun. It is possible to create a basic melody in a few steps, and to compose a song in a few minutes. You can record finished tracks and export them as WAV or MIDI files.

This software is great for electronic music, indie gaming music, chiptunes, and such stuff. It's easy to use, the settings are few and simple. It can be used, for example, to teach children and beginners how a DAW works.

1BITDRAGON packs 175 "handmade" instruments and 150 drum sounds. It includes

396 ready-to-use patterns, 24 arpeggiator presets and 24 scales.

The Euclidean rhythm generator is really fun, as is the integrated "live mode".

Thanks to its MIDI export feature, it integrates perfectly into an existing studio setup. Now, 1BITDRAGON has really become not only a super cool musical toy, but also a pretty serious and handy tool for composing and arranging music the intuitive and fun way.
