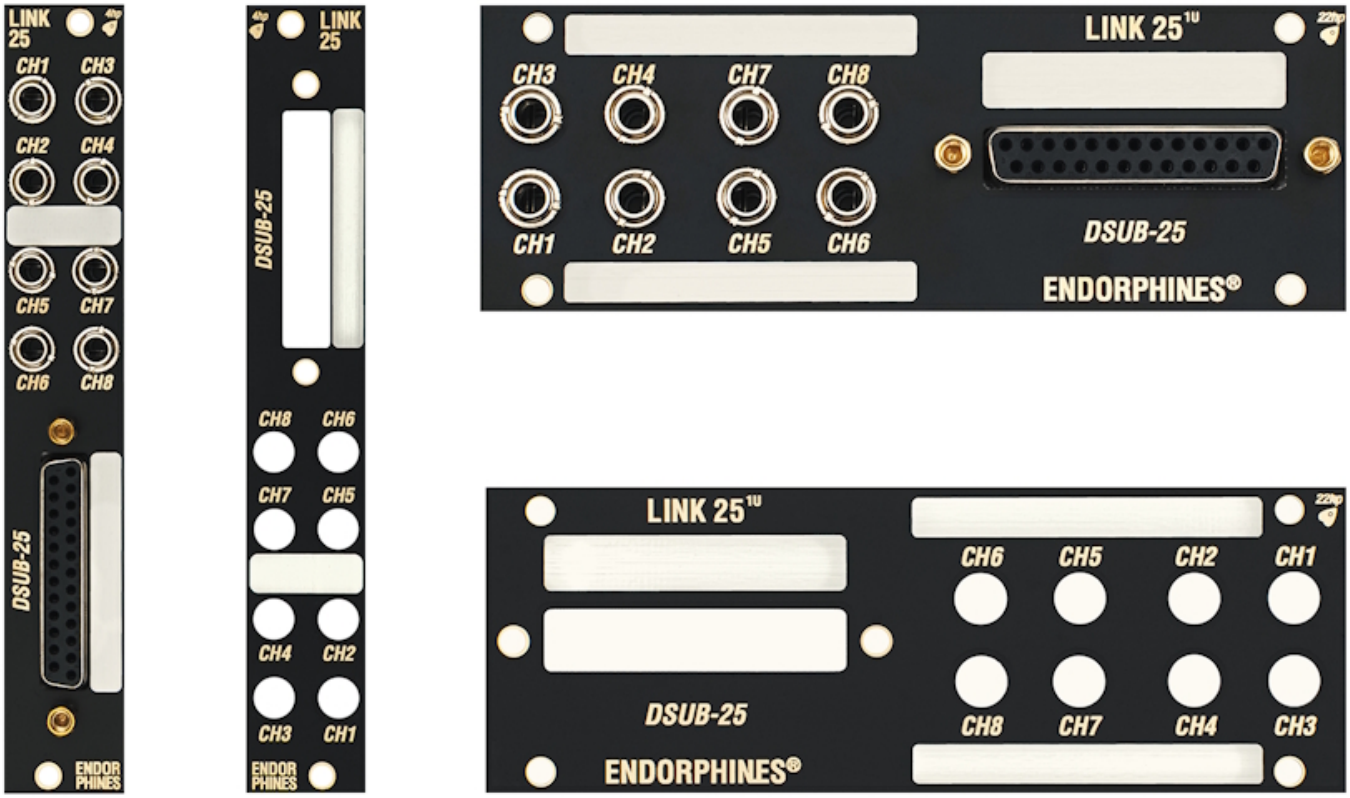
Endorphin.es LINK 25



The LINK 25 is a passive, bi-directional eight-channel bridge between Eurorack and analog TASCAM/AES59 DB25 studio connections. It replaces eight separate long patch cables with one secure multicore connection. LINK 25 can record individual modular stems, feed performance mixers such as PLAYdifferently MODEL 1 and MODEL 1.4, return line outputs from a DAW or audio interface to Eurorack, create a parallel live-and-recording path, or connect two Eurorack cases.

All eight 3.5mm TS channels are independent and can be used as eight mono paths or four stereo pairs. The signal path is completely passive, requires no power and includes a matched 2.2 kΩ network with per-channel RF filtering for practical studio and stage integration.

A reversible 4HP 3U panel is installed at the factory, while a reversible 22HP Intellijel 1U panel is included in the box. Both matte PCB panels are printed on two sides, allowing the DB-25 cable to exit up/down in 3U or left/right in 1U while labels remain upright. Writable areas identify channels and destinations, and 12.7 mm stereo-pair spacing supports the Endorphin.es Airline adapter and compatible TRS-to-dual-TS splitters.

Key Features:

- 8 independent passive, bi-directional channels / 4 stereo pairs.

Phoca PDF

- Analog TASCAM/AES59 female DB25 to 8 × 3.5mm TS.
- Interface, mixer, case-to-case and parallel-recording workflows.
- Matched 2.2kΩ network and differential RF filtering per channel.
- Reversible 4HP 3U and 22HP Intellijel 1U panels included.
- Writable routing labels; no power required; 0mA current draw.

The price is US$79 / €79. The launch date and dealer availability is the 21 of September 2026. A shielded analog TASCAM/AES59 male-to-male DB-25 cable is required and sold separately (cable examples are included in the manual).
