

EastWest ICONIC

EastWest presents ICONIC, the only synth collection that features the sounds of the world's best-selling songs, played by the original players, and programmed by the original programmers. EastWest teamed up with Anthony Marinelli, synth mastermind behind Michael Jackson's *Thriller*, to make sure everything in ICONIC sounded true to the original productions of the world's mega hits. Sampling rare vintage synthesizers like the ARP 2600, Minimoog Model D, Oberheim OB-X,

Sequential Prophet 5, Yamaha CS-80 and the Synclavier II, EastWest has skillfully recreated some of the most iconic sounds in music history and turned them into modern virtual instruments.

“We realized that you can’t recreate many of these sounds today because there is very limited access to all of the original equipment used back then to create each sound,” says Producer Doug Rogers. “Lucky for us, Anthony has a museum-worthy collection of these keyboards, and he was able to recreate the exact sounds as only he knew the original programming and keyboard combinations used. Our team then added incredible new recording techniques and software features that will allow you to transform these historic sounds into modern masterpieces. I hope our users have as much fun using these ICONIC sounds as we had making them.”

ICONIC’s user interface centers around an FX Pad with 4 selectable Macro Effects that modulate multiple parameters simultaneously. Blending a vintage knob-per-function design, with sleek modern styling, all of ICONIC’s controls are easily accessible in a single page. Shape these ICONIC synth sounds from the dual filters that can be modulated, an advanced 16-step arpeggiator, multi-mode portamento (glide), and a bevy of effects to widen, pulse, distort, delay, and spatialize the final sound.

While ICONIC features synths and sounds used in classic songs that have sold hundreds of millions of copies, it's not stuck in any one time period. After recording these rare synthesizers in historic EastWest Studio 1, the producers also sent the sounds to analog tape machines (including a tube Studer J37) and pushed them to levels to create tape saturation and harmonic distortion for an alternative modern sound. The instruments were also re-amped in EastWest Studio 2, using multiple mic positions so the studio sound could be added to the direct sounds, a technique that was often used by Thriller recording and mixing engineer Bruce Swedien.

Meet the Producers:

- Sound titan Doug Rogers is the highly esteemed producer and visionary behind EastWest Sounds. He is the recipient of three NAMM TEC Awards for Best Musical Instrument Software in the past five years. His dedication to quality and innovation has provided millions of musicians with tools that have changed the way music is created and produced.
