

KEMPER PROFILER Player LVL II & III

Today Kemper announces the immediate availability of powerful two-level paid Upgrades for the acclaimed KEMPER PROFILER Player guitar amplifier: LVL II and LVL III. The PROFILER Player is the most powerful package from Kemper in terms of tone per device and size. Now, the time has come to add some extra gravitas, and increase the impact of the Player's footprint.

The LVL II Upgrade is exactly what guitar players expected and wished for. You get all the amazing FX types the PROFILER is famous for. And yes, this includes the amazing „big machine“-type Reverbs, Delays, the Pitch Shifters, the Shapers, and all the Modulation FX. And yes, there is the Kemper Drive System, the Kemper Fuzz System, and all the Equalizers. And there is access to the highly acclaimed Impedance Switch all guitar players love from the PROFILER Stage for getting that ultra-authentic feel and behavior from the FUZZ tones.

And there is Morphing. Yes, the unique morphing - just hit a Rig Button again and Morphing will take a gentle crunch tone to a screaming banshee that's surfing on a wave of healthy delay and reverb - to return to its quieter self if you hit that rig button again. Alternatively, you can seamlessly navigate the amount of morphing with any Expression pedal. Of course, it doesn't stop here. After you went to LVL II and got all the FX, you might want more simultaneous FX, a looper, rig spillover control, etc.

LVL III essentially launches the PROFILER Player up into the PROFILER Stage league. To upgrade to LVL III, it is mandatory to have the LVL II upgrade already installed. Of course, both LVL II and LVL III can be purchased as one package installed in just

one go. This features all the Effects and all the FX-Blocks. And of course, there is more space for the rigs. The Player Upgrade LVL III features 125 banks with 5 rigs each, leading to a total amount of 625 Rigs. Taking the PROFILER Player on tour? No problem, just hook it up via USB-MIDI and switch through an entire show. At local gigs, Clubs, and of course stadiums and arenas.

The Upgrade Levels overview:

LVL II:

- All the famous KEMPER FX Types
- Morphing
- Output EQs
- Rig X-Fade Time
- BeatScanner

LVL III adds:

- Rig Spillover
- Parallel Path
- 8 FX Blocks
- Looper
- 125 Banks, 5 rigs each, in total 625 rigs
