

Moog Knob Kit for Mavis, Subharmonicon, DFAM & Werkstatt-01

Top off your Moog semi-modular instruments with custom-designed Moog-style knobs. This new knob kit is a perfect fit for 6mm diameter knurled pots commonly found on synthesizers, featuring an internal interface to lock the knob in place when assembled - without the need for a set screw. The Moog Knob Kit for Knurled Pots comes with 25 knobs in each package, so you can stylize your favorite Eurorack modules and Moog semi-modular instruments.

Easy to install by hand and designed to preserve each instrument's front panel print, these knobs make for a great addition to any Mavis, DFAM, Subharmonicon, Werkstatt-01, and most other Eurorack modules.

The Moog Knob Kit for Knurled Pots is now available at authorized Moog dealers worldwide and directly through Moog's website.
