

PreSonus has updated its Studio Magic Suite

PreSonus has updated its popular Studio Magic Suite for macOS and Windows. An amazing \$1,099 value that is provided free to new and existing registered owners of any currently available PreSonus audio interface or mixer, the 2021 Studio Magic Suite software bundle now includes popular standalone applications; plug-in effects and virtual instruments in VST, AU (Mac), and AAX formats; lessons; and more.

Arturia Analog Lab Intro delivers some of the most iconic synth and keyboard sounds of all time, taken from Arturia's 28 expertly crafted V Collection instrument emulations. From analog synthesizers to revolutionary digital workstations, these are sounds that made history.

The fun and funky Cherry Audio Surrealistic MG-1 Plus Synthesizer is an authentic recreation of the Realistic MG-1 synthesizer sold in Radio Shack stores in the 1980s. The Surrealistic MG-1 Plus delivers fat analog tone in spades, along with a unique polyphonic oscillator section, "bell tone" ring modulation, glide, auto-repeat note triggering, oscillator sync, and a number of improvements that tremendously expand its capabilities.

Ghosthack Essential Sounds is the perfect sound pack for music producers and content creators alike, delivering professional one-shots, loops, MIDI files, and full music tracks.

UJAM Virtual Bassist ROWDY is your loudmouthed, high-energy bassist with bite! ROWDY adds picked, overdriven electric bass sounds to your track that are suitable for a variety of styles, from powerful punk to rock and modern metal. If your bass has to cut through heavy drums and a wall of guitars, ROWDY is the solution.

The 2021 edition of Studio Magic Suite also now includes a three-month subscription to Soundsnap, home to over 380,00 high-quality, project-ready sound effects. Soundsnap members include some of the biggest names in film sound, podcasting, game design, and music production.

Of course the 2021 edition of Studio Magic Suite still contains your favorites from the 2020 edition.

Back by popular demand are Ableton Live Lite DAW, Brainworx bx_opto compressor and bx_rocrack guitar-amp modeling plug-in, Cherry Audio Voltage Nucleus modular synthesizer, iZotope Neutron Elements compressor/EQ/exciter/transient shaper, Klanghelm SDRR2tube multi-purpose processor, KV331 Audio Synthmaster Player semi-modular synth, Lexicon MPX-i Reverb, Mäag Audio EQ2 two-band equalizer, Melodics custom piano lessons, Native Instruments Replika delay plug-in, Output Movement rhythm processor, Plugin Alliance SPL Attacker Plus attack-event amplifier, and UVI Model D concert grand piano.

The 2021 edition of the PreSonus Studio Magic Software Suite is included free with the purchase of any current PreSonus audio interface (including Revelator and ioStation 24c), StudioLive Series III and ARc-series mixer, and - new for 2021 - all PreSonus FaderPort-series and ATOM-series hardware controllers registered after February 1, 2021. Between March 15 and May 31, 2021, PreSonus studio monitor customers are also eligible to receive the Studio Magic Suite, along with a special version of Studio One Prime. Studio Magic software will be automatically added to your MyPreSonus account after a qualifying product registration.
