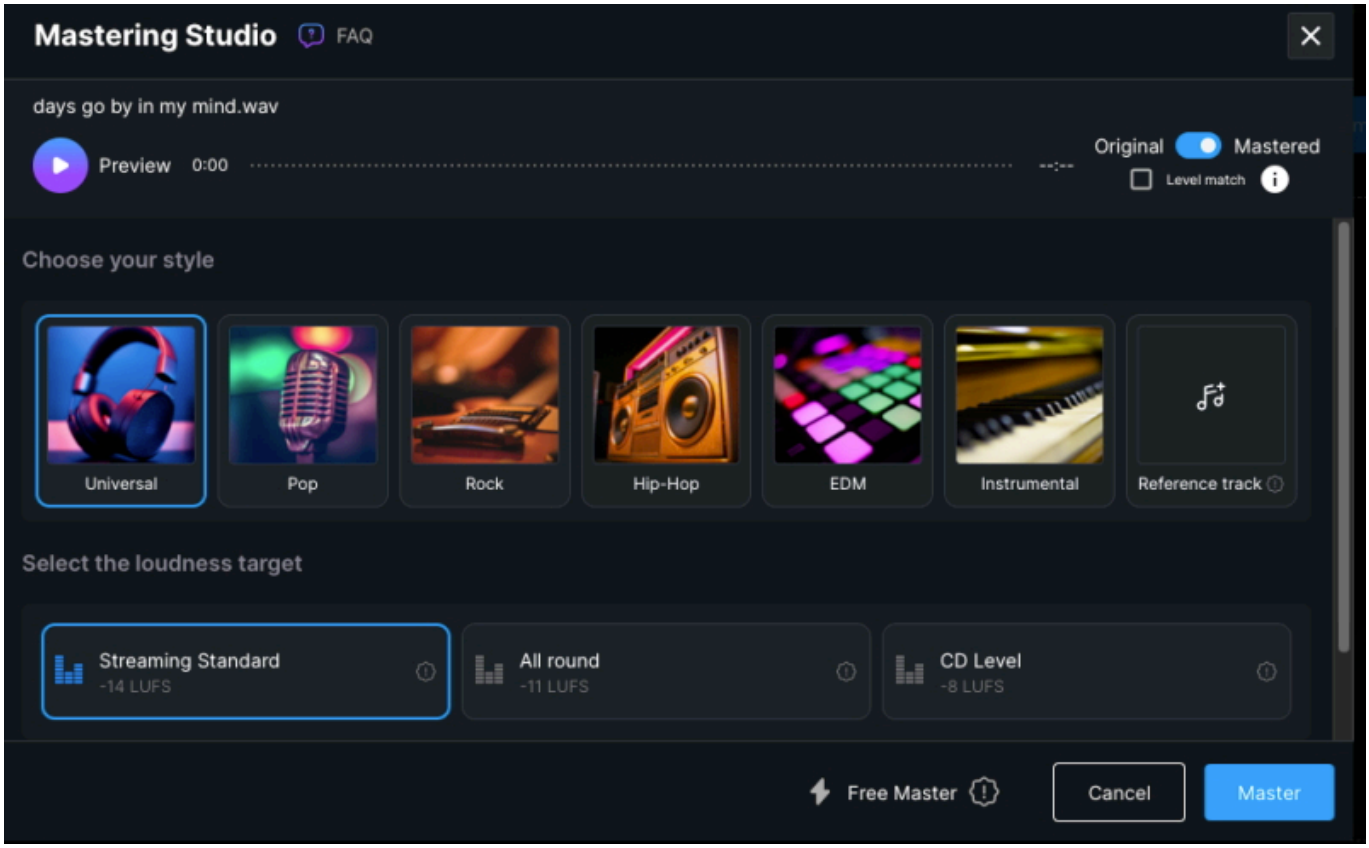
Slate Digital Updates VIRTU Online Mastering Platform



Slate Digital announces that the VIRTU online mastering platform is now available for public access. VIRTU is Slate Digital's online mastering service which was previously only available to All Access Pass members. With the help of curated Style profiles, a user-friendly interface, and a newly added Reference Track feature, VIRTU makes it easy for users of all experience levels to achieve a professional, polished sound.

VIRTU's step-by-step workflow is simple: just upload your mix (WAV files only), select the style profile that best fits your track, and pick your loudness target. You also have the option to adjust some more advanced controls, like the frequency balance, compression and stereo width of your master. You can even upload a reference track that VIRTU will use to further shape the EQ curve and loudness of your track.

VIRTU is available both for All Access Pass and Complete Access subscription holders as well as for public use. Subscribers get three free mastering credits per month, with additional credits available for purchase at $2.99 each. Public access users receive two free mastering credits in their account at sign up, with additional masters available for purchase at $4.99 each.
